

By Crystal O'Donnell

Protecting Privacy in Electronically Stored Information

The protection of personal information is a well-known concept in Canada. However, protecting private information can be more difficult with electronically stored information (ESI). Applied Discovery tests your knowledge on this important issue.

1

When producing ESI in a legal proceeding, you do not need to worry about protecting private information since the information is being produced pursuant to the court rules.

True or False?

2

When collecting ESI you do not have to worry about employee private information on company issued computers, laptops, and PDAs because the computers are company property.

True or False?

3

Your client has received a court order to produce documents as a non-party. Since your client received a court order, you do not have to worry about protecting any private information.

True or False?

4

The use of vendors and sophisticated electronic tools can assist your client in protecting private personal information.

True or False?
